

YOU ARE INVITED!

Come listen to Robert Davis, Denver City Forester, Talk about the Emerald Ash Borer Threat and Denver's Response Plan

You have likely heard that the Emerald Ash Borer (EAB), an insect that has devastated ash tree populations in mid-western cities, was discovered in Boulder in September. With 15% of Denver's tree cover consisting of ash trees (some 330,000 trees), the detection of this insect in Colorado raises serious concerns about the future of our urban forest. EAB kills weak and healthy trees, young and mature, and all major North American ash species. This makes it one of the most serious threats facing North American forests today – a threat that presents staggering ecological and economic impacts far exceeding Dutch Elm Disease.

WHEN: Thursday, January 30th at 6:00 PM

WHERE: Denver Botanic Gardens (1007 York St.) Gates Hall

Co-sponsored by: Denver Botanic Gardens, Council members Jeanne Robb and Albus Brooks, Cheesman Park Advocacy Group, Congress Park Neighbors, Alamo Placita Neighborhood Association, South City Park Neighborhood Association, Cherry Creek North Neighborhood Association, Country Club Historic Neighborhood Association, Morgan Historic District, City Park West Neighborhood Association, and Capitol Hill United Neighborhoods (Call 303-830-1651 for more info.)
